

ALBy Data Privacy Statement

At ALBy, safeguarding your privacy is of paramount concern to us. This Privacy Statement elucidates the procedures and protocols we adhere to in the management and handling of your data when you avail of our services, specifically those that utilize OpenAI's GPT API technology for educational content creation.

Utilization of OpenAI's GPT API:

ALBy employs OpenAI's GPT API to access its extensive language model capabilities. In accessing this technology through the API, we can be sure that the data inputs or outputs associated with the use of the GPT API are **NOT** used for training OpenAI's GPT's model.¹

Ownership and Control of Data:

As a user of ALBy's services, you **retain full ownership and control** over your data. It is imperative to clarify that your data that you send through our platform is not used for training purposes for ChatGPT enterprise.

Transmission of Data to OpenAI's GPT API:

In line with our commitment to privacy, we restrict the type of information transmitted to OpenAI's GPT API to text content extracted solely from your educational slides. This is exclusively done for the purpose of generating *personalized* and *tailored* lesson summaries and multiple-choice questions. We do not upload slide images or any other forms of media to the API.

Note about GPT's training process: It is important to note that ChatGPT does not replicate or store training data in any retrievable database. Rather, the model learns by identifying patterns and relationships between words, updating its internal parameters accordingly. These parameters, or "weights," then serve to predict and generate novel responses to user queries. At no point does the model have the ability to "copy and paste" from its training data. This means that once ChatGPT has learned from the data, it no longer has access to it in a manner that could result in verbatim duplication or copyright infringement.

This characteristic of the model's training and operation substantially diminishes any likelihood of copyright issues, as it is designed to generate unique responses based on learned associations, rather than directly replicating any source material.²

Should you have any further questions or concerns regarding this Privacy Statement, please do not hesitate to contact us.
